

4.(AMENDED) A method of enabling a user to access content information, the method comprising:
-enabling the user to select the content information for recording;
-enabling the user to select at least a specific one from multiple locations for play-out of the recorded selected content information;
-making the recorded selected content information available for play-out at the specific location;
and

wherein:

-the specific location has a recording system; and
-the recording takes place at the specific location.

21
5.(AMENDED) A method of enabling a user to access content information, the method comprising:
-enabling the user to select the content information for recording;
-enabling the user to select at least a specific one from multiple locations for play-out of the recorded selected content information;
-making the recorded selected content information available for play-out at the specific location;
and
wherein:

-the content information is recorded at a first recording system;
-the making available comprises supplying the recorded selected content information from the first recording system to the specific location.

8.(NEW) The method of claim 5, wherein the content information is selected from a broadcast or a multicast program guide.

9.(NEW) The method of claim 5, further comprising:
-enabling the end user to specify a time frame for making the recorded content information available for play-out at the specific location.

10.(NEW) The method of claim 4, wherein the user is enabled to select the specific one from multiple locations prior to the recording.

11.(NEW) The method of claim 5, wherein the user is enabled to select the specific one from multiple locations prior to the recording.

12.(NEW) A device comprising:

- a first menu from which a user can select a content information for recording;
- a second menu from which a user can select at least a specific one from multiple locations for play out of the recorded selected content information;
- a transfer arrangement that enables to make the recorded selected content information available for play-out at the specific location; and
- a recording system for recording the selected content information.

13.(NEW) The device of claim 12, wherein the first menu is comprised in a broadcast or a multicast program guide.

14.(NEW) The device of claim 12, wherein the second menu enables the end user to specify a time frame for making the recorded content information available for play-out at the specific location.

15.(NEW) A software application enabling a user to access content information, the software application comprising the following computer-executable instructions:

- enabling the user to select the content information for recording;
 - enabling the user to select at least a specific one from multiple locations for play-out of the recorded selected content information;
 - making the recorded selected content information available for play-out at the specific location; and
- wherein:
- the specific location has a recording system; and
 - the recording takes place at the specific location.
